

Angelica Allieu

Computer science and
business administration

What motivated you to study Engineering/IT?

I have always been interested in computers, but I never had the courage to take it as a career step. Until my cousin, who also studied it, encouraged me to take this path, for which I am very grateful to her today.

What's your favorite memory of the GWiEIT summer school?

There were too many, but it was mostly the moments when all the students came together in exchange and enjoyed the beautiful scenery of Sydney. Also the food was always very tasty.

What would you recommend to women who just started their IT/Engineering studies?

Be brave, you may feel out of place at the beginning, but everything will fall into place and you will have many great experiences and learning impressions. Besides, this study is also an opportunity to give free rein to your creativity.
