

Aya Zuhair Khaleel

What motivated you to study Engineering and IT?

My mother has influenced me and many other women who work in IT.

Impressions of your studies

My studies are very computer science-heavy which I like very much, that's exactly what I wanted. I have learned to think like a computer scientist, which is very different. I have been able to experience many impressions and was able to acquire a lot.

Of course, there are always some things that could be improved, and that's good because without improvement there is no progress, but on the whole I like my studies very much and I am glad to have chosen this study.

What would you like to do after your studies?

I would like to get my master's degree, develop in the professional world and eventually start a business.

Impressions of the International Summer School

The Summer school was a completely new experience for me. A very positive experience, I must say. I have already learned a lot in the first few weeks, especially in terms of communication on an international level. We got a lot of input, which inspired me and gave me a new perspective on many aspects. You learn a lot about agile working but also about interdisciplinary working. A plus point was of course also that you got to know many people with whom you have made a friend. That welds people together.
