Gabrielle Walker

What motivated you to study Engineering and IT?
I was motivated to study software engineering, as I believe it's an industry that's still in its growth phase. There is so much to learn about and it's applicable to almost everything in our society.

Impressions of your studies
Over the last four years, I have found software engineering to be a great course. While sometimes it does challenge me a lot, I still enjoy the problem solving approaches required to excel in this course.

What would you like to do after your studies?
After I graduate I am hoping to travel a little bit more and then I would love to work for a small tech startup as either a front-end developer or UX designer.

Impressions of the International Summer School
The summer school was a great experience that allowed me to meet lots of different people from different engineering backgrounds. There was a great balance of study and time to explore the city.
