

Nour Khelifi

What motivated you to study Engineering and IT?

In the context of my work as a journalist, I have always had contact with the field of IT, be it investigative data journalism or data science, which aroused interest in me, but I always had great respect and sometimes also fear of IT, because this field seemed so incredibly complex and difficult to me, especially since it is also a male-dominated area. Nevertheless, I plucked up the courage and thought I'd give it a try.

People who influenced your decision

Can't say anything to this 😊

Impressions of your studies

So far, I've gotten a very good overview of most fields in IT and realise with each topic

how diverse and endless the work areas and opportunities are in this industry, which makes me feel very positive and also gives me a lot of motivation.

What would you like to do after your studies?

After my bachelor's degree, I definitely want to gain work experience in the industry in addition to further master's studies. The current goal is to combine my profession in journalism with IT, which will definitely be an exciting thing to do, as there are countless opportunities in this field to specialise in.

Impressions of the International Summer School

So far, I have found it exciting to work with other IT students, but also to exchange ideas and get to know different work and university contexts in addition to different realities of life. I continue to be excited and look forward to completing a successful project with my team, where each of us can contribute and show our strengths.
