University of Applied Sciences Berlin

International Summer School
for project partners

Description

Please state the name of the company and a general project description

Initial situation

Please describe in 3-5 sentences the initial situation and the problem for which a solution is needed

Project idea (vision)

Please give a short description of the product idea (how a future product can solve the problem), i.e.:

- description of the benefit
- description of evoked customer excitement

Project Requirements

Please state functions and important features (e.g. in form of user stories)

Project Aims

The project is successful if...
a) summarise minimum expected results here.
b) name the results that characterise a good realisation

Technical Framework

Give us some information about the technologies you need. Please use free accessible and platform-independent tools. Our experience has shown that difficulties often arose when an integration was requested which was too close with the company's infrastructure (e.g., Windows server). In this case, the students should be provided with a test environment that can be accessed from outside.

Contact persons

person 1:

        name, email, telephone

person 2:

        name, email, telephone
